

Weekly Public Status Report of Oil and Gas Activities Offshore Newfoundland and Labrador

As of: August 7, 2006

Also on the Internet - <http://www.cnlopbnl.ca>

GEOSCIENTIFIC PROGRAMS					
Program Number	Operator/Survey (Location)	Vessel/Contractor	Start Date	Km Completed (Km Planned)	Comments
8924-G005-015P	Geophysical Service Inc. / Labrador 2D Seismic Survey	M/V GSI Pacific / Geophysical Service Inc.	June 30, 2006	4324 CMP Km (20,671 CMP Km)	240 CMP Km recorded during reporting period.
8924-H032-006E	Husky Oil Operations Limited/ Fortune 3D Seismic Survey	Western Regent/ Western Geco	July 20, 2006	18324 CMP Km (27,855 CMP)	9074 CMP Km recorded during reporting period.
8929-E038-002E	ExxonMobil Canada Ltd/Orphan Basin Resistivity Survey	REM Angler/ Electromagnetic Geoservices A/S	August 7, 2006	0 CMP Km (1231 CMP Km)	Transiting to survey location.

HIBERNIA DRILLING PROGRAM						
Well (Unique well identifier)	Location (NAD83)	License	Installation	Spud Date	Current Depth (Projected Total Depth)	Current Status
HMDC Hibernia B-16 54W (354B164650048454)	46°45'01.427" N 48°46'53.654" W	PL 1001	Hibernia Platform M71 (East Rig)	5/20/2006 (Sidetrack Date)	7,090 meters (7,090 meters)	Plugged and abandoned on July 21, 2006.
→ HMDC Hibernia B-16 57 (357B164650048450)	46°45'01.484" N 48°46'53.738" W	PL 1001	Hibernia Platform M71 (East Rig)	July 26, 2006	301 meters (TBD)	Pre-drill to conductor casing setting depth on B-16 57 complete - conducting rig maintenance in preparation for B-16 59.
→ HMDC Hibernia B-16 55 (355B164650048450)	46°45'01.796" N 48°46'54.527" W	PL 1001	Hibernia Platform M72 (West Rig)	---	299 meters (300 meters)	Continuing rig maintenance.

TERRA NOVA DRILLING PROGRAM						
Well (Unique well identifier)	Location (NAD83)	License	Installation	Spud Date	Current Depth (Projected Total Depth)	Current Status
Petro-Canada et al Terra Nova F-88 4 (304F884630048150)	46° 27' 19.802" N 48° 27' 41.479" W	PL 1002	Henry Goodrich	May 22, 2006	5,617 meters (5,617 meters)	Completions tubing run. - Xmas tree landed.

WHITE ROSE DRILLING PROGRAM						
Well (Unique well identifier)	Location (NAD83)	License	Installation	Spud Date	Current Depth (Projected Total Depth)	Current Status
Husky Oil et al White Rose E-18 6 (306E184650048000)	46° 47' 21.927" N 48° 02' 36.529" W	PL 1006	GSF Grand Banks	March 6, 2006	1,000 meters (4,668 meters)	Suspended on March 18, 2006 with 406mm casing set and cemented - To be re-entered at a later date.
Husky Oil et al White Rose E-18 5 (305E184650048000)	46° 47' 21.763" N 48° 02' 38.521" W	PL 1006	GSF Grand Banks	March 6, 2006	4,286 meters (4,286 meters)	Running 178mm liner.
Husky Oil et al White Rose B-07 7 (307B074650048000)	46° 46' 13.49" N 48° 00' 38.61" W	PL 1006	GSF Grand Banks	October 12, 2003	231 meters	914mm hole drilled, 762mm conductor casing set and cemented on October 13, 2006 - to be re-entered at a later date.
Husky Oil et al White Rose J-22 2 (302J224700048000)	46° 51' 39.62" N 48° 03' 39.93" W	PL 1006	GSF Grand Banks	April 24, 2004	1,215 meters	406mm hole section drilled, 340mm casing set and cemented on April 28, 2004 - to be re-entered at a later date.
<small>Note. The above status includes wells that are currently in the drilling or completions phase. Additional information on the status of various development wells for the Timberline, Terra Nova and White Rose projects available from the C-NLOPB's website under RESOURCE INFORMATION. Click on Development wells (White Rose Field) for additional information on the status of White Rose development wells that have been completed.</small>						
DELINEATION DRILLING PROGRAM						
Well (Unique well identifier)	Location (NAD83)	License	Installation	Spud Date	Current Depth (Projected Total Depth)	Current Status
Husky Oil et al West Bonne Bay F-12 (300F124640048150)	46° 31' 22.024" N 48° 17' 27.216" W	SDL 1040	Rowan Gorilla VI	July 1, 2006	4,033 meters (4,631 meters)	Drilling 216mm hole.

BOP/BOP Stack:	Blowout preventers/blowout preventer stack - an assembly of heavy-duty valves attached to the wellhead to control well pressure and prevent a blowout.
Casing:	Steel pipe set in a well to prevent the hole from sloughing or caving and to enable formations to be isolated (there may be several strings of casing in a well, one inside the other).
Cementing:	Pumping a liquid slurry of cement, water and other additives behind a string of casing to isolate formations.
Completion/Completed:	The activities necessary to prepare a well for the production of oil or gas or the injection of water or gas into the reservoir.
Fish:	An object lost (or stuck) in the wellbore obstructing operations.
Fishing:	Operations to recover a fish.
Injecting:	Injecting water or gas into the reservoir for the purpose of maintaining reservoir pressure, Maximizing oil recovery and conserving resources.
Liner:	A length of casing suspended from the base of a previously installed casing string (a liner does not extend back to the surface of the well).
Logging:	Acquisition of downhole data using tools run in the well, usually on wireline.
Perforate/perforating:	Piercing the casing and cement using shaped explosive charges to provide a flow path for formation fluids.
Producing/Production:	Flowing oil and/or gas from a well to the production systems.
Production Tree:	An arrangement of heavy-duty valves and fittings installed on the wellhead to control flow from the well and/or to facilitate injection operations.
Reaming:	An operation to restore a wellbore to its original diameter (occasionally, a wellbore will cave in).
Seismic kilometers:	The total number of kilometers of data recorded in a geophysical program.
Shut-in:	A well in which the valves in the production tree have been closed to cease production or injection operations on a well.
Sidetracking:	The operation of deviating a well around a fish.
Spud:	The initial penetration of the ground or seafloor – the start of the drilling operation.
Suspension/Suspend:	The temporary cessation of drilling or production operations in a well.
Well workover:	A program of work performed on an existing well.
Wellbore:	The hole drilled by the drill bit.
Wellhead:	Steel equipment installed at the surface of the well containing an assembly of heavy duty hangers and seals (the wellhead is used to support the weight of casing strings hung from it and to contain well pressure)
