

**Weekly Public Status Report of Oil and Gas Activities Offshore Newfoundland and Labrador**

**As of: July 21, 2008**

Also on the Internet - <http://www.cnlopb.nl.ca>

**GEOSCIENTIFIC PROGRAMS**

Program Number	Operator/Survey (Location)	Vessel/Contractor	Start Date	Km Completed (Km Planned)	Comments
8924-H032-007E	Husky Oil Operations Limited/ 3D Eastern Jeanne d'Arc	M/V CGG Veritas Vantage/CGG Veritas	May 30, 2008	18,276 (93,427)	4,580 CMP km recorded during reporting period.
8924-G005-018P	Geophysical Service Incorporated/ Labrador Shelf	M/V GSI Pacific/Geophysical Service Incorporated	June 30, 2008	95 (18,650)	95 CMP km recorded during reporting period.

**HIBERNIA DRILLING PROGRAM**

Well (Unique well identifier)	Location (NAD83)	License	Installation	Spud Date	Current Depth (Projected Total Depth)	Current Status
HMDC Hibernia B-16 25X (325B164650048452)	46°45'01.796" N 48°46'54.694" W	PL 1001	Hibernia Platform M72 (West Rig)	June 18, 2008	6,359 metres (6,360 metres)	Preparing to perforate.

**WHITE ROSE DRILLING PROGRAM**

Well (Unique well identifier)	Location (NAD83)	License	Installation	Spud Date	Current Depth (Projected Total Depth)	Current Status
Husky Oil et al White Rose B-07 10Z (310B074650046000)	46° 46' 13.165" N 48° 0' 37.162" W	PL 1006	GSF Grand Banks	June 19, 2008	4,055 metres (5,152 metres)	Drilling 311mm hole section.

**EXPLORATION DRILLING PROGRAM**

Well (Unique well identifier)	Location (NAD83)	License	Installation	Spud Date	Current Status
Shoal Point Energy et al Shoal Point 2K-39Z (302K394840058450)	48° 38' 35.151" N 58° 50' 31.498" W	EL 1070	Nabors 45ETD	March 4, 2008	Drilling Operations.

BOP/BOP Stack:	Blowout preventers/blowout preventer stack - an assembly of heavy-duty valves attached to the wellhead to control well pressure and prevent a blowout.
Casing:	Steel pipe set in a well to prevent the hole from sloughing or caving and to enable formations to be isolated (there may be several strings of casing in a well, one inside the other).
Cementing:	Pumping a liquid slurry of cement, water and other additives behind a string of casing to isolate formations.
Completion/Completed:	The activities necessary to prepare a well for the production of oil or gas or the injection of water or gas into the reservoir.
Fish:	An object lost (or stuck) in the wellbore obstructing operations.
Fishing:	Operations to recover a fish.
Injecting:	Injecting water or gas into the reservoir for the purpose of maintaining reservoir pressure Maximizing oil recovery and conserving resources.
Liner:	A length of casing suspended from the base of a previously installed casing string (a liner does not extend back to the surface of the well).
Logging:	Acquisition of downhole data using tools run in the well, usually on wireline.
Perforate/perforating:	Piercing the casing and cement using shaped explosive charges to provide a flow path for formation fluids.
Producing/Production:	Flowing oil and/or gas from a well to the production systems.
Production Tree:	An arrangement of heavy-duty valves and fittings installed on the wellhead to control flow from the well and/or to facilitate injection operations.
Reaming:	An operation to restore a wellbore to its original diameter (occasionally, a wellbore will cave in).
Seismic kilometers:	The total number of kilometers of data recorded in a geophysical program.
Shut-in:	A well in which the valves in the production tree have been closed to cease production or injection operations on a well.
Sidetracking:	The operation of deviating a well around a fish.
Spud:	The initial penetration of the ground or seafloor – the start of the drilling operation.
Suspension/Suspend:	The temporary cessation of drilling or production operations in a well.
Well workover:	A program of work performed on an existing well.
Wellbore:	The hole drilled by the drill bit.
Wellhead:	Steel equipment installed at the surface of the well containing an assembly of heavy duty hangars and seals (the wellhead is used to support the weight of casing strings hung
