Dear Mr. Hicks:

As requested, the Department of National Defence (DND) has gathered information pertaining to the Labrador Sea Gravity Gradient Survey 2014-2018.

Our records indicate there are no shipwrecks present within the immediate survey area. Given our understanding the activities to be conducted will not interact with the sea floor, the associated UXO risk is assessed as negligible. Nonetheless, due to the inherent dangers associated with UXO and the fact that the Northwest Atlantic Ocean was exposed to many naval engagements during WWII, and that the project area includes the Sydney Shallow Disposal Site, should any suspected UXO be encountered during the course of the operations, the Proponent should not disturb/manipulate it. The Proponent should mark the location and immediately inform the Coast Guard. Additional information is available in the 2010 Annual Edition – Notices to Mariners, Section 37.

Further UXO general information is available at our website at www.uxocanada.forces.gc.ca.

DND is likely to be operating in the vicinity of the study area in a non-interference manner during the project timeframe; thus, there is potential for interaction with naval operations in areas where seismic activities will occur. Please keep DND informed of dates and locations of activities. Also, DND would like to review the Environmental Assessment to identify potential impacts from arrays due to proximity to DND operations.

Should you have any questions or require any additional information please do not hesitate to contact me.

Sincerely,

/ MARLANT Safety and Environmental Officer
for Commander
