RE: Black Spruce Exploration Corp: 2015 - 2016 Western Newfoundland Exploration
Drilling - Environmental Assessment Project Description (Revised)

Dear Mr. Burley;

Black Spruce Exploration Corp (BSE) is proposing to carry out exploration drilling on Exploration Licence (EL) 1120 in Western Newfoundland in 2015, pursuant to the terms and requirements of this licence which was issued by the C-NLOPB in January 2010. This will involve drilling an onland to offshore petroleum exploration well in the Lark Harbour area of the Bay of Islands.

Please find enclosed an Environmental Assessment (EA) Project Description for this proposed exploration drilling program, and is being submitted to the C-NLOPB in order to initiate the EA review process for this Project. This document has been prepared and submitted in accordance with the Board's associated EA requirements and processes, and will allow you to prepare and provide a Scoping Document that will inform and guide the eventual planning, preparation and submission of the EA Report.

This Project Description revises and replaces a previous version which was submitted by BSE and others on March 6, 2013, and is intended to reactivate the EA review process that was initiated at that time, based on the revised Project concept and description outlined herein. The Proponent of this Project is now BSE alone, and the intent is to drill an onland to offshore petroleum exploration well in Exploration Licence 1120, The Project will involve conventional drilling activities only, and no hydraulic fracturing or other reservoir stimulation techniques are being planned or proposed.

Thank you in advance for your receipt and review of this EA Project Description, which we trust provides adequate and appropriate information to allow the C-NLOPB to re-commence the EA review process for this Project. If you have any questions or require anything further, please do not hesitate to contact the undersigned at your convenience.

Sincerely yours;

Director
