Re: Errata - Old Harry Environmental Assessment Report Correction of Cuttings Volumes

Corridor Resources Inc. has revised the “Environmental Assessment of the Old Harry Prospect Exploration Drilling Program” report (Stantec December 2011) to replace an error in the volume of cuttings discharge identified in the report. . Due to an editing error, the correct volume numbers were not transferred from the “Old Harry Drilling Mud and Cuttings Dispersion Modelling Final Report” (AMEC 20 May 2011) supporting document. Enclosed are replacements for pages 38 and 301 of the English Environmental Assessment (EA) Report. The correct cuttings volumes in the EA Report should be:

- Sea Floor discharge of **196** m³ of cuttings; and
- Surface discharge of **211** m³ of cuttings.

Please replace the respective pages in the previously transmitted EA Report. For those of you that requested the EA Report in French, these pages have already been replaced. A CD is also enclosed with the revised EA Report (English and French versions) which reflects the correct volume of cuttings discharged.

If you have any questions or require additional information, please do not hesitate to contact me at (709) 778-4232 or by email at eyoung@cnlopb.nl.ca.

Yours truly,
