Dear Mr. Edwards,

SUBJECT: Eastern Newfoundland Offshore Exploration Drilling Project – Round II Information Requirements and Information Requirements specific to the Environmental Impact Statement Addendum for the Addition of Exploration Licence 1134

On August 27, 2018, the Canadian Environmental Assessment Agency (the Agency) sent 20 Round II Information Requirements (IRs) and two clarifications to ExxonMobil following technical review by the Agency and other federal government experts of ExxonMobil's Round I IR responses (submitted on May 15, 2018 and July 5, 2018). At that time, the Agency indicated that comments from all participating Indigenous groups had not yet been received, and that additional Round II IRs may be submitted to ExxonMobil once the comments were received and reviewed. The Agency has now completed this review and has identified four additional Round II IRs (see Attachment 1). These IRs include two follow-up IRs from Indigenous groups, and two IRs regarding additional information required to support the development of the Agency's Environmental Assessment (EA) Report.

Also on August 27, 2018, the Agency advised ExxonMobil that revisions were required to the Environmental Impact Statement (EIS) Addendum for the Addition of Exploration Licence 1134. The revised EIS Addendum was subsequently received on August 31, 2018 and the Agency began a technical review of the EIS Addendum on September 10, 2018. The Agency, in collaboration with federal government experts, has completed the technical review of the EIS Addendum and identified three IRs specific to the information provided in that document (see Attachment 2). Note that a number of clarifications were also identified during technical review; these will follow separately via e-mail.

The Agency requires acceptable responses to IRs in order to complete its review of the EIS and to proceed with the preparation of its Environmental Assessment Report. The federal timeline for the EA

remains paused. Once you have submitted complete responses to all IRs, the Agency will take a period of up to 15 days without the timeline resuming to form an opinion on whether the required information has been provided. If the Agency determines the responses to be complete, it will commence a technical review of the additional information and the timeline for the environmental assessment will resume the following day. If the responses are determined to be incomplete, you will be notified at that time. If the Agency has not come to a conclusion after 15 days, the timelines will resume the next day. For further information, please consult the Agency document *Information Requests and Timelines*.

The responses may be in a format of your choice; however the format must be such that the responses to individual IRs can be easily identified. You may wish to discuss certain IRs with the Agency or other government experts, as necessary, to obtain clarification or additional information, prior to submission of the responses. Working directly with government experts in this manner may help to ensure that IRs are responded to satisfactorily. The Agency can assist in arranging meetings with government experts, at your request.

The IRs and your responses will be made public on the Canadian Environmental Assessment Registry (CEAR) Internet site: <https://www.ceaa-acee.gc.ca/050/evaluations/proj/80132?culture=en-CA>

The Agency would be available to further discuss the information requirements. Please contact me at 902-426-9460 or via email at CEAA.ExxonMobil.ACEE@canada.ca.

Sincerely,
<Original signed by>

Shauna O'Brien
Project Manager
Canadian Environmental Assessment Agency
