Hi Darren,

Please see the response below from our expert.

Thank you,

Deborah

Hi Deborah,

Without 3-dimensional modelling, they cannot address our concerns for estimating the proportion of oil that would form the cloud in the water or where the cloud will move by ocean currents to indicate where oil deposition on the sea floor may occur. They are using a 2-dimensional model which only estimates the behaviour of the oil that rises to the water surface. We have no comments for the results of that model.

Regards,

Heather
