HMDC Seismic Project EA Amendment

Dear Ms. Young:

Enclosed please find two copies of the LGL Limited amendment to the HMDC seismic environmental assessment titled *Amendment to the Environmental Assessment of HMDC's 2D/3D/4D Seismic Projects 2013 – Life of Field* (Project No. SA1207) dated July 2015. This amendment assesses the potential effects of operating a sound velocity profiler during HMDC seismic programs on the valued ecosystem components (VECs) identified in the seismic project environmental assessment.

In summary, the Amendment concludes the residual effects of the sound velocity sensor pulse emissions and the physical presence of the remotely operated towed vehicle (ROTV) containing the sound velocity sensor on all VECs are predicted to be not significant.

An electronic copy of the Amendment will also be submitted by email. If you have any questions or require additional information please contact the undersigned at your convenience.

Sincerely,

Environmental Advisor

Encl.
