**HMDC Seismic Project Revised EA
Amendment**

Dear Ms. Young:

Enclosed please find two copies of the LGL Limited revised amendment to the HMDC seismic environmental assessment titled *Amendment to the Environmental Assessment of HMDC's 2D/3D/4D Seismic Projects 2013 – Life of Field* (Project No. SA1207) dated September 2015. This revised amendment assesses the potential effects of operating a sound velocity profiler during HMDC seismic programs on the valued ecosystem components (VECs) identified in the seismic project environmental assessment and addresses the comments received from the C-NLOPB.

In summary, the Amendment concludes the residual effects of the sound velocity sensor pulse emissions and the physical presence of the remotely operated towed vehicle (ROTV) containing the sound velocity sensor on all VECs are predicted to be not significant.

An electronic copy of the Amendment was also submitted by email. If you have any questions or require additional information please contact the undersigned at your convenience.

Sincerely,

Environmental Advisor

Encl.
