**Subject :Seabed sampling activities offshore Newfoundland and Labrador, 2015**

Dear Adam,

Please find attached the Environmental Project Description for the geotechnical and geochemical data acquisition and seabed sampling program in the Labrador offshore being proposed by MG3. MG3 will be the operator of the program and will handle responsibilities for preparation of the environmental assessment report and any supporting documents. MG3 is a UK based Geoscience company specialising in geophysical, geochemical and geotechnical surveys.

MG3 is proposing to conduct seafloor and seep sampling exploration activities offshore Newfoundland and Labrador in the Labrador Sea. Exploration activities are to be conducted in the Newfoundland and Labrador offshore area from the tip of Labrador to the Orphan Basin to identify those areas that have the potential to contain oil-bearing structures/basins. The proposed Project is a multi-year program (2015 to 2024) to be conducted within the Study Area as illustrated in the Project Description. The Project Area for activities proposed for 2015 are also illustrated in the Project Description. The proposed Project includes the following non-invasive research activities: sampling of natural seabed seeps; high-resolution bathymetry via multibeam echosounder; sub-bottom profiles; collection of shallow seabed cores; and conducting seabed heat flow measurements.

Thank you for your assistance with reviewing the Project Description. Please feel free to call or e-mail me directly if you have any questions concerning the document or the proposed program."

Yours sincerely,

  
**Geoscience Manager
