1.0 Introduction

Sikumiut Environmental Management Ltd. (Sikumiut) is engaged by RPS Energy to carry out the consultation program in support of the Environmental Assessment for the proposed Seismic Project to be conducted on the Labrador Offshore Shelf in 2011. A pool of staff from Nain, Happy Valley-Goose Bay and St. John's are available to conduct the consultations. It is proposed that contacts will be made with resident stakeholders in communities on the north coast of Labrador from Nain to Rigolet; the upper Lake Melville towns of Happy Valley-Goose Bay, Northwest River and Sheshatshit; and the south coast communities from Cartwright to Mary's Harbour. Non-residents with interests in coastal Labrador will also be consulted.

The consultation is planned to facilitate the consideration of stakeholders regarding public issues and concerns that are relevant to the overall project and that will need to be specifically addressed in the environmental assessment report.

Sikumiut will begin the consultations with the appropriate agencies/stakeholders by a letter of introduction together with an information document outlining the project. This correspondence will invite questions and comments from stakeholders by electronic media. It can also present the opportunity for direct meetings or public sessions. Sikumiut will follow up on its correspondence with phone calls to confirm that this correspondence is received and to determine if any further questions or discussion is required.

2.0 The Consultation Plan

This will be a stakeholder approach to consultation:

- Stakeholders in community, local government and industry sectors will first be contacted by E-mail and/or postal mail. Introductory correspondence and an information package on the project and the environmental process will be provided. Essentially, this initial contact will explain the project and invite input.
- Subsequently, Sikumiut will initiate discussions with the individual stakeholders by telephone.

2.1 The Schedule

The consultation correspondence and follow-up discussions will be conducted during the period January 28 to February 14.

- The correspondence and information package will be ready for sending to stakeholders by January 28.
- Follow-up phone contacts will be made from February 2 – 14.

2.2 Correspondence and List of Stakeholders

Correspondence will be in the form of a letter of introduction and an information package naming the companies involved, providing an overview of the exploratory project, and outlining the consultation process and schedules.

The draft letter and information package are attached in Appendices 1 and 2, respectively.

A contact list by Agency/Affiliation and Community is included as Appendix 3

2.3 Meetings

As explained in the Sikumiut proposal, community meetings will not be planned in the initial correspondence. However, Sikumiut will offer the option to the organizations for direct meetings or public sessions. Sikumiut will review the program with RPS Energy in the event that such requests for group meetings or public information sessions are received.

2.4 RPS Energy Coordination

Before any material is forwarded to stakeholders, it will be vetted through RPS Energy.

3.0 Report

Sikumiut will compile a written record of all the discussions on a community basis and highlight the issues that were raised. The main report will be provided in electronic

format suitable for integration into the Project EA. Weekly reports will be submitted either verbally or as e-mail correspondence.

4.0 Protocol Considerations

Correspondence will be sent to Nunatsiavut Government and the Innu Nation to advise of the consultations. This can be followed up with telephone contacts as required. Documents used for the meetings will be in English only.

In view of the timeline, E-mail will be used for correspondence as much as possible.

Letter of Introduction**

January 28, 2011

[Insert Name & Address]

Dear {Name}:

Re: Offshore Labrador Shelf Environmental Assessment

RPS Energy is a global multi-disciplinary consulting company with offices in Halifax, Nova Scotia. It is the process of an Environmental Assessment (EA) in preparation for conducting seismic petroleum explorations on the Labrador Shelf area in 2011. As part of this EA, it has engaged Sikumiut Environmental Management Ltd. (Sikumiut) to conduct consultations as required under the Canada-Newfoundland Labrador Offshore Petroleum Board (C-NLOPB) regulations.

The proposed seismic project is a 2 dimension (2D) seismic survey. The area to be covered in this study is shown on the map in the attached information document. This type of seismic survey has been conducted regularly offshore Labrador and local Labrador Inuit observers will be placed on the vessels involved. It is proposed that the project will begin in 2011 and be completed over a six (6) week period and it may continue seasonally over a 3 year period.

The EA is an important requirement of the planning process and necessary in acquiring government approval to carry out the project. As part of the work in preparing the EA report, consultation will be held with stakeholders in the coastal communities adjacent to the study area. The purpose of this consultation is to introduce the proposed plan and to receive local comment and concerns from the coastal areas of Labrador as it may relate to this exploration program.

Enclosed is an information document on the project and we invite any questions or comments you may have about the project by mail, e-mail or phone. While no public sessions are currently planned we are available to discuss the project with you. Our contact information is listed below.

In addition, Sikumiut staff may contact you by phone in the near future to discuss the project and to receive your comments.

Our contacts for this consultation are:

Mr. Harold Murphy
E-mail: hmurphy@nf.sympatico.ca
Telephone (709) 722-1059
P.O. Box 39089
St. John's, NL

**Appendix 2
Information Package**

INTRODUCTION

TGS-NOPEC Geophysical Company ASA (TGS- NOPEC) and Multi Klient Invest AS, (a subsidiary of PGS Geophysical AS), in a joint venture, propose to conduct a 2D marine seismic exploration survey project offshore Labrador Shelf within the regulatory jurisdiction of the Canada-Newfoundland and Labrador Offshore Petroleum Board (C-NLOPB). Multi Klient Invest AS will be the operator.

The Environmental Assessment (EA) is being conducted by RPS Energy. The EA is an important requirement of the planning process and necessary in acquiring government approval to carry out the project. As part of the work in preparing the EA report, Sikumiut Environmental Management Ltd. (Sikumiut) will conduct consultations with stakeholders in the coastal communities immediately adjacent to the Study Area. The purpose of this consultation is to introduce the proposed plan and to receive local comment and concerns regarding the coastal areas of Labrador as it may relate to offshore oil and gas development.

TGS-NOPEC provides geoscience data and services to oil and gas Exploration and Production companies around the globe. TGS geophysical and geological data products include multi-client seismic libraries, extensive magnetic and gravity data, the industry's largest global database of digital well logs and regional interpretive products. TGS also provides high-end depth imaging services to help resolve complex seismic imaging problems (See *www. tgsnopec.com*).

PGS (and its subsidiary Multi Klient AS) is a publicly traded Norwegian company Norwegian and is one of the major global companies in the acquisition of seismic data for the oil and natural gas companies. PGS has offices in over 25 countries with regional centers in London, Houston and Singapore. The headquarters is in Oslo, Norway and the PGS share is listed on the Oslo stock exchange. (See *www.pgs.com*).

THE ENVIRONMENTAL ASSESSMENT

The approach for the project has been developed to satisfy requirements of the Canada Environmental Assessment Act.

It is designed to:

- focus on issues of great concern;
- address regulatory requirements;
- considers stakeholder issues and concerns early in the planning process;
- focus project specific environmental assessments by identifying the key environmental issues associated with a particular activity and/or area.

In this particular case, Valued Environmental Components (VECs) will be included but not limited to:

- marine and migratory birds; marine fish and shellfish;
- marine turtles;
- species at risk;
- sensitive areas; and
- commercial fisheries.

PROJECT OVERVIEW

The official name of the project is PGS/TGS NOPEC 2011 Labrador Shelf. The survey area is illustrated in Figure 1. Note that the area covered appears quite large, however the survey lines will form a very wide grid within the study area. Survey lines will be spaced approximately 100 Km apart and within the area there will be 10 lines running from the northwest to the southeast and six lines running from the southwest to the northeast. It is within C-NLOPB jurisdiction, outside the 12 mile limit and outside the "Zone" area of the Labrador Inuit Land Claims Agreement.

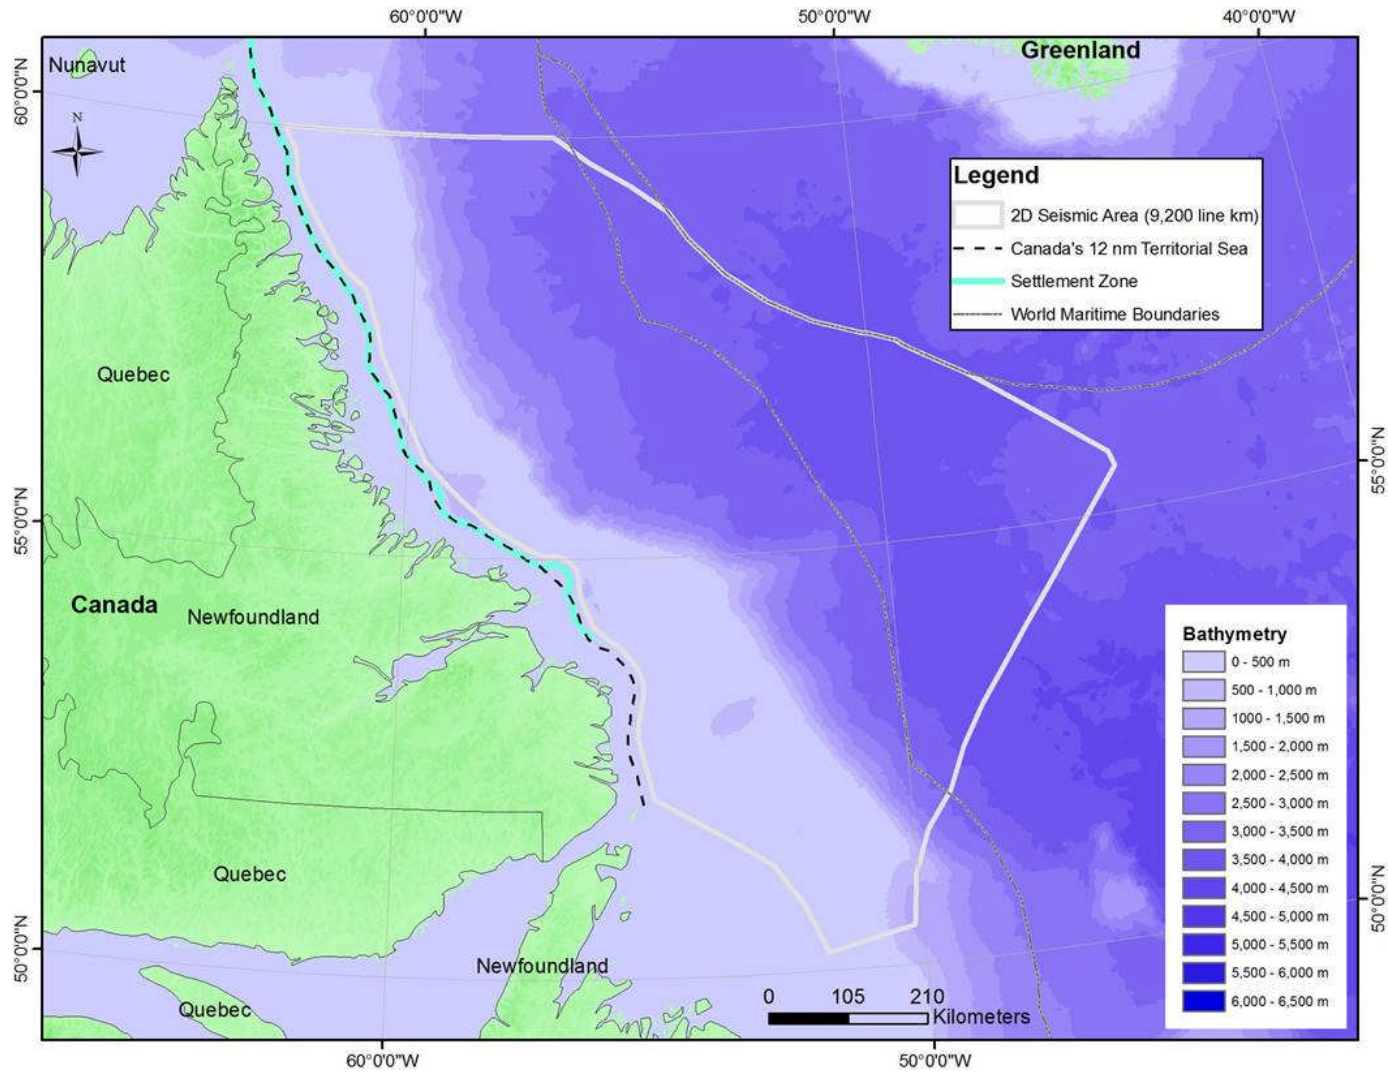

Figure 1. Study Area

- The project is a marine geophysical mapping program very similar to past surveys conducted in the area by other operators from 2002-2010.
- Conventional 2D Seismic technology will be deployed; that is the use of sound pressure to map rock layers and properties through the detection of different reflections of sound passing through the formations.
- A specifically designed, recently built vessel, the *Sanco Spirit*, will tow a single streamer air gun array to produce short bursts of sound energy and sound receiving hydrophones that collect and pass to recorders echoes of sound from reflecting layers.
- The seismic vessel will be accompanied by another vessel which will assist in operations.
- A marine mammal and fisheries liaison officer will be a component of the operational crew. Inuit will be engaged in these roles.
- The survey will be undertaken in the period between June 2011 to December 2011 (most likely during July and August), subject to weather conditions and vessel availability. Ea approvals will allow for continuation on a seasonal basis over a 3 year period ending in 2013.
- The data collected will assist in determining the potential for future oil and gas exploration.

ENVIRONMENTAL ASSESSMENT REVIEWS

The operators will periodically review the EA report, as required by the C-NLOPB, to ensure that it remains applicable for the operations. It will continue stakeholders' consultation as required and will work with regulatory authorities to ensure that the EA remains fit for the purpose.

The results of environmental assessment will be used as part of the project planning and decision-making related to the issues that may be identified for consideration during the operations of this specific project.

These are:

- Fish and fish habitat (focusing on commercial species and their habitat)
- Commercial fisheries;
- Marine mammals and sea turtles;
- Water birds including seabirds, waterfowl and shorebirds;
- Species at risk; and
- Sensitive and special areas.

Other issues may be included based on consultations with various stakeholders including the public, other resource users and regulatory authorities.

YOUR INPUT

You are invited to provide comments on these and any other factors that you feel may be impacted by these activities in the Labrador Shelf Area. You can provide your comments to Sikumiut Environmental Management Ltd. as follows:
