March 13, 2018

Dear Mr. Hicks:

Thank you for providing Polarcus UK Ltd's response to the concerns raised by our submission on the *Environmental Assessment Eastern Newfoundland 2S/3D/4D Seismic Survey Program 2016-2022*.

We appreciate that Polarcus has undertaken to resolve our concerns but we must highlight that no new evidence has been provided.

We are disappointed about this and must re-iterate that this is an evidence-based process and nothing has been provided to support or suggest that these activities will not be to the detriment of our harvesting activities. Because of this, our original concerns still stand.

To mitigate these concerns, we request that an appropriate avoidance protocol be negotiated between Polarcus and CAPP/GEAC members, prior to the project proceeding. This will provide a level of comfort to our operators that they will not be negatively impacted by increased exploration effort on the part of Polarcus.

We thank you again for allowing us this opportunity to respond to the addendum document.

Sincerely,

Bruce Chapman  
Executive Director – CAPP  
President – GEAC
