**Re: Ocean Eye aerial monitoring system – addition to GGEP authorization application**

Dear Adam:

As per our previous discussions, TGS wishes to add an aerial surveillance system called OceanEye® to the operational scope for our Seafloor and Seep Sampling program to assist in real-time detection of natural petroleum seeps and slicks on the ocean surface. The system is addition to the activities outlined in 'Section 2.2.5 - Detection of Natural Seafloor Seeps' of the Project Description submitted with the original authorization application package. Attached is a one page document outlining the system and its implementation on our program.

Thank you for your assistance in reviewing the authorization application. Please call or e-mail me directly if you have any questions concerning the documents or the proposed program.

Sincerely,

  
Senior Regulatory & Compliance Specialist  
TGS
